PRELIMINARY AMENDMENT

U.S. Appln. No.: National Stage of PCT/JP2003/07787

Attorney Docket No.: Q85322

**AMENDMENTS TO THE CLAIMS** 

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. (previously presented): A method for regenerating an  $NO_x$  removal catalyst

employed in a flue gas NO<sub>x</sub> removal apparatus, characterized in that the method comprises a

regeneration step including immersing the NO<sub>x</sub> removal catalyst at ambient temperature in

regeneration water containing substantially no chlorine and no cleaning component; removing

the catalyst from the regeneration water; and removing water from the catalyst and a treatment

step including treating the regeneration water which has been employed in the regeneration step

in an ordinary wastewater treatment facility without performing a heavy metal treatment step.

2. (previously presented): A method for regenerating an NO<sub>x</sub> removal catalyst according

to claim 1, wherein the NO<sub>x</sub> removal catalyst is immersed in regeneration water until bubbling

stops and, subsequently, removed form the regeneration water.

3. (original): A method for regenerating an NO<sub>x</sub> removal catalyst according to claim 1,

wherein the NO<sub>x</sub> removal catalyst removed from the regeneration water is washed with water.

4. (original): A method for regenerating an NO<sub>x</sub> removal catalyst according to claim 2,

wherein the NO<sub>x</sub> removal catalyst removed from the regeneration water is washed with water.

PRELIMINARY AMENDMENT

U.S. Appln. No.: National Stage of PCT/JP2003/07787

Attorney Docket No.: Q85322

5. (previously presented): A method for regenerating an NO<sub>x</sub> removal catalyst according

to claim 1, wherein the regeneration water which has been used in the regeneration step is treated

in the treatment step after it is repeatedly used, without undergoing any treatment, a plurality of

times in a regeneration step for regenerating another NO<sub>x</sub> removal catalyst.

6. (currently amended): A method for regenerating an No<sub>x</sub> removal catalyst according to

claim 2, wherein the regeneration water in which the NO<sub>x</sub> removal catalyst is immersed is treated

in the treatment step after it is repeatedly used, without undergoing any treatment, a plurality of

times. which has been used in the regeneration step is treated in the treatment step after it is

repeatedly used, without undergoing any treatment, a plurality of times in a regeneration step for

regenerating another NO<sub>x</sub> removal catalyst.

7. (currently amended): A method for regenerating an NO<sub>x</sub> removal catalyst according to

claim 3, wherein the regeneration water in which the NO\* removal catalyst is immersed is treated

in the treatment step after it is repeatedly used, without undergoing any treatment, a plurality of

times. which has been used in the regeneration step is treated in the treatment step after it is

repeatedly used, without undergoing any treatment, a plurality of times in a regeneration step for

regenerating another NO<sub>x</sub> removal catalyst.

PRELIMINARY AMENDMENT

U.S. Appln. No.: National Stage of PCT/JP2003/07787

Attorney Docket No.: Q85322

8. (currently amended): A method for generating an NO<sub>x</sub> removal catalyst according to

claim 4, wherein the regeneration water in which the NO<sub>x</sub> removal catalyst has been immersed is

repeatedly used a plurality of times, which has been used in the regeneration step is treated in the

treatment step after it is repeatedly used, without undergoing any treatment, a plurality of times

in a regeneration step for regenerating another NO<sub>x</sub> removal catalyst.

9. (original): A method for regenerating an NO<sub>x</sub> removal catalyst according to any of

claims 1 to 8, wherein the NO<sub>x</sub> removal catalyst having been regenerated is installed in the flue

gas NO<sub>x</sub> removal apparatus without drying the catalyst before installation.

10. (original): A method for regenerating an NO<sub>x</sub> removal catalyst according to any of

claims 1 to 8, wherein the NO<sub>x</sub> removal catalyst having been regenerated is installed in the flue

gas NO<sub>x</sub> removal apparatus after catalytic performance of the regenerated NO<sub>x</sub> removal catalyst

is assessed.

11. (original): A method for regenerating an NO<sub>x</sub> removal catalyst according to claim 9,

wherein the NO<sub>x</sub> removal catalyst having been regenerated is installed in the flue gas NO<sub>x</sub>

removal apparatus after catalytic performance of the regenerated NO<sub>x</sub> removal catalyst is

assessed.

PRELIMINARY AMENDMENT

U.S. Appln. No.: National Stage of PCT/JP2003/07787

Attorney Docket No.: Q85322

12. (original): A method for regenerating and NO<sub>x</sub> removal catalyst according to any of

claims 1 to 8, wherein the regenerated NO<sub>x</sub> removal catalyst is installed in the flue gas NO<sub>x</sub>

removal apparatus such that the catalyst is inverted with respect to the direction of the flow of

discharge gas.

13. (original): A method for regenerating and NO<sub>x</sub> removal catalyst according to claim 9,

wherein the regenerated NO<sub>x</sub> removal catalyst is installed in the flue gas NO<sub>x</sub> removal apparatus

such that the catalyst is inverted with respect to the direction of the flow of discharge gas.

14. (original): A method for generating an NO<sub>x</sub> removal catalyst according to claim 10,

wherein the regenerated NO<sub>x</sub> removal catalyst is installed in the flue gas NO<sub>x</sub> removal apparatus

such that the catalyst is inverted with respect to the direction of the flow of discharge gas.

15. (original): A method for regenerating an NO<sub>x</sub> removal catalyst according to claim 11,

wherein the regenerated NO<sub>x</sub> removal catalyst is installed in the flue gas NO<sub>x</sub> removal apparatus

such that the catalyst is inverted with respect to the direction of the flow of discharge gas.
